SUMMARY

Agentic AI Engineer and Full Stack Developer with hands on experience in building AI driven applications, prompt engineered AI agents, and workflow automation systems. Skilled in API integration, system integration, and developing scalable solutions using no code / low code platforms and modern web technologies.

Experienced in designing and optimizing AI-powered workflows and business process automation using GPT-based tools, Claude, and Gemini to enhance development efficiency and solve real-world problems. Strong understanding of automation lifecycle, solution design, and AI deployment, with a focus on building scalable and interactive systems.

Proficient in collaborating on cross-functional projects, troubleshooting technical issues, and continuously improving automation systems. Currently expanding expertise in containerization (Docker) and cloud-native architectures to support scalable AI solutions.

CORE COMPETENCIES

- AI Agents Development (Agentic AI)
- AI Automation & Workflow Design
- OpenAI Agents SDK, Claude (Anthropic)
- Python for AI & Automation
- No-code / Low-code Platforms (n8n)
- LangChain & RAG Systems
- Full Stack Development
- Next.js, TypeScript, Python, Tailwind CSS
- API Integration and System Integration
- AI Tools: Claude Code, Gemini CLI, Qwen Code
- PostgreSQL (Database Management)
- Client Communication & Coordination

WORK EXPERIENCE

AI Engineer

2026 – Present

BranDive Media Solutions

- Developing RecruitFlow AI, an end-to-end AI-powered recruitment automation platform for TalentBridge Recruitment using Next.js, TypeScript, FastAPI, OpenAI Agents SDK, PostgreSQL (Neon), and Custom JWT Authentication.
- Designing and implementing a multi-agent AI architecture for resume parsing, candidate screening, candidate scoring, interview scheduling, email automation, and recruitment workflow orchestration.
- Building scalable REST APIs, AI-powered backend services, and real-time dashboards while integrating Google Calendar, email automation, and third-party services.
- Collaborating with the AI engineering team to build production-ready, scalable, and intelligent recruitment solutions following modern software engineering best practices.

Full Stack Developer

2026 – Present

3PL Dynamics

- Developing and enhancing a modern logistics and supply chain management platform using Next.js, TypeScript, Tailwind CSS, FastAPI, and REST APIs.
- Building responsive, high-performance user interfaces with reusable and scalable frontend components.
- Developing backend integrations, optimizing application performance, and implementing production-ready features.
- Collaborating with the development team to improve website functionality, user experience, and overall system reliability.

Personal AI Employee – Autonomous Digital Workforce

2026 – Present

Independent AI Project

- Designing AI-powered digital employees capable of automating real-world business workflows using Agentic AI architectures.
- Building scalable AI automation systems with OpenAI Agents SDK, FastAPI, Python, and modern full-stack technologies.
- Managing the complete software development lifecycle, including system architecture, implementation, deployment, testing, and optimization.

EDUCATION

Intermediate in Commerce

2025

Board of Intermediate Education, Karachi

Bachelor of Science in Computer Science

2025 - Present

Karachi University (KU), Karachi
